AssessTube

AssessTube is a service in which videos can be hosted for streaming to a range of devices, rather like a private "YouTube". The principal features of **AssessTube** include:

- **Video streaming or downloading** (as required)
- **Video storage in a raw format to enable transcoding** (to the most appropriate formats for streaming to different devices)
- **Video hosting with permissions that control who can see what**
- **Individual user accounts and/or group set up**
- **Video uploading by AssessTech and/or customers**
- **Privacy and Security** (there are sophisticated tools for controlling who is allowed to see which videos, rather than the usual private/public/unlisted)
- **Visibility of Data** (we can retrieve data about who watched what and for how long videos were played)
- **Customised reporting and bespoke Dashboards** (same engine as AssessBook that links with a database that holds all of the user data)

AssessTube for AssessTech Training Team

The **AssessTech Training Team** use **AssessTube** to host internal training videos and evidence, collected on behalf of candidates, working toward qualifications with **AssessTech**. In this case, the service is configured with our own branding.

AssessTube for Customers

AssessTube is also available as a branded service for our customers. In this case, the service is branded with customer colours and logos and menus are tailored to reflect our customers' company standards and terminology. A language file is included that can be tailored to support either local terminology or different languages.

AssessTube Video Production

We can offer a number of additional services for filming and production of videos, including:

- Filming of training courses and other one-off events
- Route learning videos (filming of individual routes; a complete refresh of routes as a one-time service; or an ongoing refresh programme to keep videos current)
- Full video processing and format conversion services

Route Learning Videos

We can provide full 1080p HD videos for front and rear view, plus a professionally recorded voiceover. Our people hold PTS competence and will set up the cameras, record the video and provide you with fully edited and captioned videos to host on **AssessTube** or distribute via existing mechanisms.

Reports and Dashboards

All systems include the ability to make highly customised and bespoke reports and dashboards. These will mostly need to be configured by the **Asses sTech** customer operations team, but this is part of the service – there are no additional fees and there is no limit to the number you can have.

Reports and dashboards can be enabled for groups of users based on the nature of their account and according to security permissions or they can be enabled for specific users.

Dashboards contain widgets that can show any data that the viewing user is allowed to see. These widgets can be in any format – tables, charts, graphs, etc. All of these are downloadable in a number of formats (Excel, CSV, PDF, etc.) – the appropriate format depends on the nature of the widget, of course.

Reports can also contain any data that a user is allowed to see and can be in a range of formats, although the most common reports are tabular and delivered in PDF and Excel formats.
