

Incident Recovery Kit

Tabletop Simulation

The **Incident Recovery Kit** is an interactive tabletop simulation, played in the style of a board game. It has been developed by **AssessTech** as a training aid for roles such as:

- Train Operating Liaison Officer (TOLO)
- Station Incident Officer (SIO)
- Rail Incident Commander (RIC)

It's a really interesting way to train learners in how to respond to an incident, prevent escalation, and maintain a good reputation.

Incident response training is typically a dry subject and the people involved often go a long period of time between training and execution of what they have learnt. **AssessTech** developed the **Incident Recovery Kit** because learning through interactive, interesting and engaging methods improves understanding, reinforces learning and increases retention.

Learners play their way through scenarios to address issues, test their underpinning knowledge and resolve the incident in a safe manner.

Co-operation, coordination and teamwork are key to success; all learners are on the same team and will succeed or fail together.

Online Version

Following recent developments with coronavirus and the need to socially distance, we are now delivering all of our training remotely using video conferences. As part of this, we have made an online version of the **Incident Response Kit** that can be played remotely:
