

aBulletin

aBulletin comes as part of the **Bulletin module of ACMS**, and is an application for use on iPads, Android tablets and smartphones that enables a candidate to receive notices in the field. **Push notifications** identify the availability of new material that can then be downloaded, reported as read, and stored locally for reference.

Users of the app have access to the following features:

- View available bulletins with information about dates notified, downloaded, and viewed/shared
- Search and sort Bulletins by: Importance; Category; Name; Favourites
- Select a bulletin in order to download, view, sign or share
- Bulletin versions are automatically deleted when they are superseded by a new version and/or they reach their expiry date
- Sync with **ACMS**
- The app will receive **notifications** from **ACMS** when a new or updated bulletin is available
