# aCheck

aCheck comes as part of the **Check** module of **ACMS**, and is an application for use on iPads or Android tablets that enables users to conduct quick checks in the field. An example use would be for 'Fitness for Duty' checks.
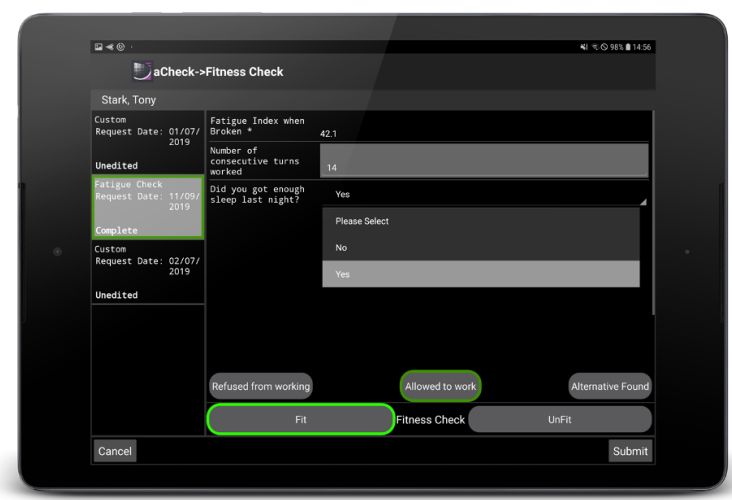

Users of the app have access to the following features:

- Set the current location
- Search for candidates by name and/or depot.
- Execute the default check
- Execute custom checks
- Sync with **ACMS**

Screenshots

The screenshot below shows an example of a 'Default Check' showing the a candidate's history of 'Fitness for Duty' checks:
